Re: Intervention for Type B Water Licence Application MS08-273, Salmon Rearing Facility on McIntyre Creek, Whitehorse, Yukon

The Yukon Department of Environment (DOE) has completed its review of this Type B water licence application. We are not intending to appear at a public hearing to make representations in connection with this matter, but would participate if a hearing is convened by the Board.

The application contains information and plans adequately prescribing known technology and work practices affording mitigation for potential adverse environmental effects and effects to fish. Standard water use licence conditions typically used by the Board, as per the expiring licence, are sufficient to alleviate our concerns.

Thank you for the opportunity to review and respond to this application. As required by the Board, a copy of this intervention has been forwarded to the applicant. Any further correspondence may be forwarded to the undersigned.

Regards,
