Attention: Rob Walker, Manager-Environmental Affairs

**RE: Water Use Application MS09-287, Highway reconstruction and Haunka Creek bridge replacement, Km 11.65 to 22 Atlin Rd.**

I have completed my review of the above referenced water use application. In order to continue processing your application, I will require your attention to the following:

1. Please refer to page 11, item 22 of the completed Information Sheet. In my review of the application materials, I could not locate an attached plan that provides a schematic drawing of the temporary detour road and crossing. Please provide the schematic drawing that shows the temporary detour road and watercourse crossing that may consist of a temporary bridge or culvert.
2. Provide a schematic drawing in plan and profile for the proposed infill of the "wet area" that you described in your application.
3. Please refer to page 12, item 23(c) (iv) of the Information Sheet. Please provide the gradation of the granular material that will be used for the infill of the wet area. The application indicates that granular E and A material will be used; however, specifications to indicate the minimum to maximum gradations were not provided. Please provide these specifications.

Thank you for your attention to the information requested above and I will look forward to your response at your earliest convenience. If you have any questions, please do not hesitate to contact me (collect) at (867) 456-3983.

Sincerely,

  
Kelly Boutilier  
Licensing Officer
