Re: Intervention for Type B Water Licence Application QZ06-074, Elsa Reclamation and Development Company Ltd.

Yukon Environment has received new information from the Water Board associated with Type B Water Licence application QZ06-074 which has an intervention filing date of August 13, 2007. This is insufficient time for our department to complete a meaningful review due to the volume of new information that has been submitted with the application after the YESAB Decision Document was issued on February 15, 2007.

Yukon Environment requests a minimum of two weeks additional time to review the new material provided in order to submit an intervention appropriate to the large scope of the application. We have discussed this and come to agreement on the extension with the proponent, EMR Type II Mines and Environment Canada. Thank you for your consideration of our request.

Regards,

Randy Lamb
