Dear Carola,

RE: Application QZ08-084-Carmacks Copper Ltd.

I am writing about the Board's public hearing on the Water Use Application by Carmacks Copper Ltd. The LSCFN has just found the attached documents in the files of Environment Canada and Yukon Government and will be applying to introduce some or all of them at the resumed hearing since they bear on the Applicant's evidence in Exhibit 12.1.a that their 1993/1994 field scale trial supported the effectiveness of their proposed technology and design, and as well it bears on the weight and significance given to Exhibit 5.4.11, the EARP Overview Monitoring Chart.

Exhibit 12.1.a, page 20 as read into the evidence by Claire Derome:

"- Western Copper ran a 350 tonne field scale heap in 1993-1994 that showed that the process is viable in Yukon's northern climate"

Please note that I have been informed that we will obtain two more similar documents tomorrow which will be also sent out to the Board and the parties.
